

AV Options LLC, Naim DR Upgrades & Recap Options - Retail price sheet (Apr 2015)

For HICAP2, SUPERCAP2, XPS2, 552PS and 555PS power supplies

All our Discrete Regulator (DR) upgrade work is performed by Chris West at our AV Options Service Center. Chris has been factory trained on the special build & test procedures for DR work, and painstakingly attends to an abundance of fine details to ensure that the best performance can be obtained from every upgraded unit. Using special measuring equipment we also verify performance of each regulator output at extremely low noise levels (below 0.000015 volts!). Each finished unit is checked for sound quality in a high performance Naim system.

RECAP OPTION

Depending on the age of a unit, for the best results it's *highly recommended* to re-cap the reservoir smoothing caps in the original (non-regulated) side of the power supply as well. See combo DR upgrade & re-cap pricing below. Note: the XPS2 DR upgrade module has the power supply smoothing caps built in by design (so no additional cost).

For all enquiries and orders Please contact: chriswest@avoptions.com

Please Note: DR upgrade kits are not available from Naim for the Olive or Chrome Bumper power supplies.

DR power supply upgrades - Retail pricesheet - Apr 2015
