

## Thank you for purchasing AV Options AC Products.

*The information below will help you get the maximum performance and musical enjoyment.*

### All AV Options AC Products are treated with our AVO Deep-Cryo process.

Find more information on our website at <http://www.avoptions.com/about/deep-cryo>

When new, our Tibia and TibiaPlus AC cables, Hubbell duplex wall outlet and SuperWiremold Power Strip will present with a low noise floor and clarity but will have a slight glare for the first 24-72 hours being powered up and playing music. Full break-in can take up to 4 weeks. As you go through the break-in period you'll note the glare going away and the sound becoming more organic, relaxed and coherent. At the same time the initial clarity, dynamics and low noise floor will be consistent.

The full AV Options AC Products loom provides any quality audio or video system with a low noise, musical foundation. Excellent value for money!

### NOTES :

- All of our Tibia / TibiaPlus / Tibia C7 AC cables need to be carefully but firmly and fully inserted into the AC inlet connector (IEC or C8) on the component.
- AC Polarity: Our Tibia C7 cable will offer better performance being plugged in one way with products like Mac Mini, Apple TV, Sonos, Naim Mu-So, etc. Once broken-in you can try either direction. The correct side will have more detail and a more open relaxed midrange. You can mark the correct orientation with white-out or similar so you can remember the orientation in the event you need to unplug the cable. We do not advise using our Tibia C7 cable replacing any C7 cable with polarized AC blades (for example on products such as cable or satellite set top boxes, etc.).
- Hubbell Deep-Cryo AC outlet installation: Installation by a licensed electrician in accordance with national and local electrical codes is strongly recommended.
- Dedicated AC circuit(s): Either 15amp or 20amp is highly recommended. Consult with a licensed electrician for installation. The benefits of a new house AC panel (Square D commercial grade for example) or sub-panel for your dedicated AC circuit and best practices for the house ground are cumulative and highly recommended as well.
- If you are using TibiaPlus or AC cables with equivalent size or larger AC plugs and need more than 5 outlets, you can use 2 AV Options SuperWiremold Deep-Cryo Power Strips. As long as they are plugged into the same duplex AC wall outlet, you are good to go. It is highly recommended that this outlet is upgraded to our Hubbell Deep-Cryo AC outlet, and that circuit is a dedicated AC circuit.
